

Intima RF

**SUPER FAST
VAGINAL TREATMENT
ONLY about 10 MINUTES**

TECHNOLOGY BACKGROUND

During menopause, fibroblasts in the vaginal mucosa slow down and can no longer produce enough collagen.

The RF (Radio-Frequency) energy acts on the mucosa by stimulating the metabolic activation of the fibroblasts and collagen. Remodeling extrametrical components and water, boosting thickness of connective tissue and epithelium.

The result is improved nourishment, tonicity, elasticity and firmness, similar to when the patient was younger.

HOW RF WORK?

Vaginal mucosa and skin differ significantly in epithelium structure. The outer skin layer has plenty of keratin and little water, while mucosal epithelium is nonkeratinized, containing water and glycogen. Due to their different levels of hydration, the Co2 laser (highly absorbed by water) has different effects on skin and on mucosa. By harnessing RF waves to heat the connective tissue of the Vaginal wall to 40 °C to 42 °C, these energy-based devices aim to induce collagen contraction, neocollagenesis, vascularization, and growth factor infiltration that ultimately revitalize and restore the elasticity and moisture of the vaginal mucosa.

Intima RF

Advanced 360°RF

Super Fast Vaginal Treatment Time
360° Large Contact Area
No Need Handpiece Rotation
Comfortable RF Treatment
